

## **KBDI Updates (January 2023)**

### **New Data Projection**

A new map projection, Texas Centric Mapping System Albers (TCMSA), has been adopted to make the raster products more end-user friendly. The cell size will remain roughly 4km x 4km based on the resolution of the NWS precipitation products. The product archive has been rerun from 2015 forward using the new projection. Maps from January 1<sup>st</sup>, 2023 forward will be available in the TWC archive and rasters from 2016-current will be made available in the raster archive.
